Dear Jodi

EDL NGD (NT) Pty Ltd
Submission on I-NTEM Market Operator Procedures

EDL is supportive of the Northern Territory Government's reform of the electricity market. The reform process will promote competition in the supply of wholesale electricity in the Northern Territory and EDL is well advanced in its preparations to participate in the proposed wholesale market. EDL welcomes the opportunity to provide the following submission on the proposed Market Operator Procedures.

EDL has no comments on the Market Participant Registration Application or the IES Deemed Load Profile.

EDL makes the following comments on the Settlements Statements & Timetable Procedure:

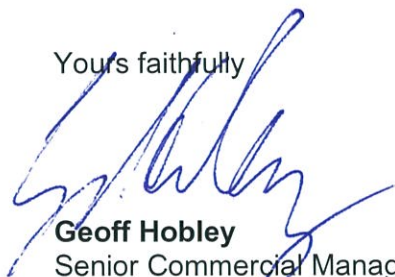

EDL notes that the requirement for the Market Operator to calculate the market price and out of balance quantities for each market interval is stated in the draft amendment to the System Control Technical Code (Code). The amended Code implies that the only information provided to Market Participants will be aggregated information, covering the whole Settlements Period. In the absence of providing the settlements calculations for each market interval, it will be impossible for Market Participants to accurately verify the settlement calculations. EDL suggests that the following data be provided to each Market Participant, for each market interval in the Settlements Period:

- Energy exported by each Generating System (or by each Generating Unit, if metered separately);
- Energy consumed at each customer meter point;
- Loss factor that is applied to each customer meter point;
- The Market Price for each Market Interval;
- The Out of Balance Quantity "Q" for each market interval; and
- The Out of Balance price that applies to the relevant Out of Balance Quantity for each Market Interval

EDL is grateful for the opportunity to make the above submission and has made similar submissions in respect of the amended Code. If you have any questions in respect of this submission, please contact Geoff Hobley on 0400 528 586.

Yours faithfully

Geoff Hobley
