Details of Retailer

Retailer (a copy of this application will be forwarded to your retailer):

Customer Reference Number (CRN):

If you are a Remote Customer (by ticking this box you are indicating you are a Remote Customer and Power and Water is your retailer)

Expedited Service Terms and Conditions

By continuing, your application will automatically be treated as an expedited connection, unless you indicate below. You do not have to accept an expedited connection, but it is the quickest way to get your connection established. By accepting an expedited connection, you are taken to have agreed to accept the terms of our model standing offer (for Basic Connection or Basic PV Connection as applicable) and to have entered into a contract with us on those terms. If you accept an expedited connection, we will not send you a separate formal offer document. Also, by connecting to our network you agree to comply with our Standard Customer Supply Agreement and, if you have a PV System, our Photovoltaic Inverter Network Connection Agreement (including as these two Agreements are amended from time to time).

I acknowledge that this request may delay the application.

Connections Applicant

Name

Signature

Date

Relationship to Customer (eg, customer, registered electrical contractor, retailer)

If the Connection Applicant is not the Customer, by signing this Connection Application as agent for or otherwise on behalf of the Customer, the Connection Applicant warrants that it is duly authorised to sign the Connection Application and bind the Customer to the Agreement. The Connection Applicant must provide Power and Water with written evidence of the authorisation (or agency) for it to sign the Connection Application, and will provide a copy of the signed Connection Application to the Customer.

Customer reference notes:

Install to Wiring Rules and Power and Water Corporation requirements, which includes:

- Service Rules;
- Installation Rules;
- Metering Manual

* For regulated customers you are agreeing to be bound to the following:

- If you select an Expedited Connection, then by doing so you are taken to agree to the terms of (as applicable) our Basic Connection Model Standing Offer or Basic PV Connection Model Standing Offer. These contracts regulate the work involved in establishing the initial connection of your premises or PV System to our network. By connecting to our network you are also taken to have accepted and agreed to comply with our Standard Customer Supply Agreement (www.powerwater.com.au/standard-customer-supply-agreement) and, if you have a PV System, our Photovoltaic Inverter Network Connection Agreement (www.powerwater.com.au/photovoltaic-inverter-network-connection-agreement). Unless you negotiate a specific alternate signed contract with us, these contracts regulate the terms upon which you are entitled to continue to remain connected to our network and receive a supply of electricity from us or (in the case of a PV System) export electricity to our network. The terms of these contracts may be amended by us from time to time and you will be bound by the amended versions as in force from time to time.

* For remote customers you are agreeing to be bound to the following:

- If you select an Expedited Connection, then by doing so you are taken to agree to the terms of (as applicable) our Basic Connection Model Standing Offer or Basic PV Connection Model Standing Offer. These contracts regulate the work involved in establishing the initial connection of your premises or PV System to our network. By connecting to our network you are also taken to have accepted and agreed to comply with our Standard Customer Supply Agreement (www.powerwater.com.au/standard-customer-supply-agreement) and, if you have a PV System, our Photovoltaic Inverter Network Connection Agreement (Remote) (www.powerwater.com.au/remote-pv-inverter-network-connection-agreement). Unless you negotiate a specific alternate signed contract with us, these contracts regulate the terms upon which you are entitled to continue to remain connected to our network and receive a supply of electricity from us or (in the case of a PV System) export electricity to our network. The terms of these contracts may be amended by us from time to time and you will be bound by the amended versions as in force from time to time.

How to determine if I am a remote customer?

- In the towns and communities identified on the our webpage under Remote Customers, we are the electricity retailer and network provider.
- View a map of remote communities we service www.powerwater.com.au/customers/remote

- This means you pay your power bill to us or we arrange the installation of your prepayment meter.
- If you live in Jabiru, Nhulunbuy and Alyangula you are also a remote customer, but Power and Water doesn't generate or distribute your electricity. We pay a third party to supply your electricity. We are still your retailer so you pay your power bill to Power and Water.
- If you don't have a home or business marked on the map, you're a residential or commercial customer and buy your power through another electricity retailer.

How much do I need to pay?

- Basic connection services have no fee as they are classified as standard control services (SCS)
- Basic PV Connections (Class 1 and Class 2) incur an upfront assessment/administration fee as outlined in the Power Services Network Tariff Structure Statement
- All other fees and charges are outlined in the Power Services Network Tariff Structure Statement

What Connections Service do I qualify for?

You qualify for a Basic Connection Service if:

- connection of residential and small non-residential premises where:
 - supply is available (i.e. there is a line available at the required voltage and with sufficient capacity for the proposed connection);
 - high voltage network extension is not required;
 - low voltage network extension is limited to one span of overhead or 25 metres of underground cable;
 - there is no network augmentation required; and
 - the maximum demand of the electrical installation is less than or equal to 10kVA single phase or 25 kVA three phase.
- connection of micro embedded generation (e.g. PV installations) with exporting capability and inverter capacity as per the definition in AS4777 and consistent with Power and Water's process regarding small inverter connected generators, where there is no network augmentation required;
- temporary low voltage connections for short term supply, which is defined as a connection for a period of 12 months or less; or
- connection of unmetered supply (other than public lighting).

You qualify for a Negotiate Connection Service if:

- your connection needs do not satisfy a basic connection service, or you choose to negotiate a negotiated connection service with us.
